ABSTRACT OF THE DISCLOSURE

Methods and apparatus to provide network traffic support and physical security support are described herein. In an example method, a virtual machine monitor (VMM) in a processor system is initialized. At least one of a network traffic intrusion event and a physical security intrusion event is identified by the VMM. At least one of a network traffic support and a physical security support is implemented in response to at least one of the network traffic intrusion event and the physical security intrusion event.
